

SPP services include: level 3 design, construction work, line installation, network connections, upgrades, relocations, maintenance, repairs and emergency services.

SPP is highly experienced in:

- Installing overhead and underground transmission lines up to 132kV in both urban and rural areas - including in challenging landscapes.
- Installing foundations in difficult locations - including drilling, blasting and pile driving.
- Replacing aerial earth wires with OPGW.
- Fibre installation: ADSS fibre and integral bearer cables.
- Liaising with local authorities and local communities to address environmental, heritage, interruptions to power supply and other concerns.

SPP is well-resourced with its own experienced work force, excavation equipment, and stringing and winching equipment which enables SPP to provide a full service without using subcontractors - and to respond quickly to emergency situations.
