

■ Construct, install, and maintains lines

SP Power constructs, installs, and maintains overhead high voltage transmission lines and low voltage distribution networks for rail transport infrastructure projects, including:

- New and duplicate rail lines
- Removal and replacement of existing lines
- Upgrading rail facilities.

■ 20 years experience

SP Power staff have had more than 20 years experience in working in rail corridors and have a thorough understanding of:

- Rail-specific safety requirements, and
- The risks and hazards associated with working beside live rail during possessions, and
- The tight non negotiable deadlines for rail work
